

## Product Introduction

CallingNow brings a new level of call visibility to your desktop. CallingNow lets you see who's calling and gives you options on how to display the information and how to act on it. CallingNow couples the standard caller ID information such as name and number with enhanced location information. When calls come in, the caller's information pops up in a balloon. The database integration option lets you automatically 'pop' up a screen that matches the phone number to the caller. This lets you see detailed information about the caller before you even answer the phone. CallingNow also allows you to return the call. CallingNow can work with external databases or Microsoft Outlook. CallingNow includes a SQL based contact manager database. Outlook integration can tie caller ID information to your Contacts in your Outlook database.

The program includes full call logging capabilities. With CallingNow you can now see more about who's calling before you answer the phone. CallingNow can work with external databases or Microsoft Outlook. CallingNow includes a SQL based contact manager database. Outlook integration can tie caller ID information to your Contacts in your Outlook database.

The program includes full call logging capabilities. With CallingNow you can now see more about who's calling before you answer the phone.

---

## Benefits of CallingNow

- **Joins caller ID to contact management on your computer.**
- **Gives you real-time call information presented to you on your desktop.**
- **Tells you who's calling and lets you decide what to do before you answer the call.**

---

## Product Features

- **Caller ID** Shows incoming enhanced caller ID information in the system tray on the desktop.
- **Screen Pop** Can coordinate to popup a screen in Outlook or a database.
- **Database** Includes a SQL based call contact database
- **Call Back** Permits you on-click call back.
- **Logging** Stores calling information in logs.
- **Caller ID Modem Included** Includes a 56k caller ID modem with Intel chipset. Once installed in a PCI slot in your computer it can be used for only caller ID, or as a standard modem.

---

## Ordering Information

**Model:** CNK1

**Includes:** CallingNow software, Caller Database and Caller ID Modem.

**Price:** ~~\$99.95~~ **\$89.95 - Limited Time Sale Price**

**Order Online:** [www.callingnow.info](http://www.callingnow.info)

**Order by Phone:** 877-845-2549

## Database

The included database is a fully functional contact manager with a form based front end and SQL based database backend. The contact manager contains the common contact fields (name, address, phone etc) and includes a clipboard field parser for inserting information from other sources. Search options include a simple text based search form as well as SQL query form generator. The database can be easily integrated with the CallingNow caller ID middleware to allow screen pops based on matched phone numbers. This allows a pop up of a contact record when a phone call comes in.

## Calling

CallingNow can place call backs to calls with a simple right click by the phone number. CallingNow will dial the number using either the built in modem or TAPI services running on the computer.

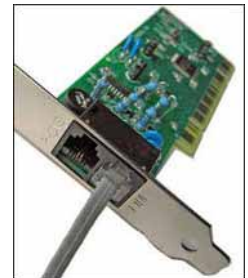

## Logging

CallingNow will log all incoming call activity to the file selected. This gives you a record of call date and time, caller number, name and caller state. The information is logged whenever caller ID information is delivered, regardless if the phone was answered.

## Modem

CallingNow Includes a caller ID V.34 modem with Intel chipset. The result is a platform with low power requirements and high performance. With the robust host-based controller software and powerful DSP, the Win modem supports all industry-standard AT commands for data, IS-101 voice, and Class 1 fax.

## Requirements

- Caller ID service from your phone company or VOIP provider.
- A phone line connected to your computer.
- A PCI slot in your computer.
- Windows XP (Pro or Home) or Windows Server 2003.
